

SUBHADIP CHOWDHURY

AI SOLUTIONS ENGINEER | AGENTIC AI, BUSINESS INTELLIGENCE & ENTERPRISE AUTOMATION

Kol-157, West Bengal, India • +91 7908309248 • subhadipchowdhury1998@gmail.com • linkedin.com/in/subho98

PROFESSIONAL SUMMARY

AI Solutions Engineer with 5+ years of enterprise technology experience across banking and infrastructure environments, spanning business intelligence, large-scale automation, and agentic AI systems. Currently building production LangGraph agents with Model Context Protocol (MCP) tool integrations for automated infrastructure remediation, backed by a solid foundation in Power BI reporting, SQL/ETL pipelines, and endpoint automation across 20,000+ systems. Comfortable owning a problem end-to-end — from data modeling and dashboard design to agent architecture and the database schema that tracks execution state and audit history.

TECHNICAL EXPERTISE

Agentic AI & Orchestration: LangGraph (state graphs, checkpointing, time-travel debugging), Model Context Protocol (MCP) tools & connectors, human-in-the-loop workflows, Claude Code

Data Engineering & Databases: SQL, PostgreSQL, star schema design, ETL design, data modeling, query optimization

Business Intelligence & Ops: Power BI (DAX, star schema modeling, row-level security, incremental refresh, enterprise deployments)

Programming & Scripting: Python (Asyncio, Pydantic, REST APIs), PowerShell, Power Automate, Bash

Cloud & Enterprise Infra: Azure Data Lake, AWS S3, Oracle, Windows Server, Linux (RHCSA), ServiceNow CMDB

PROFESSIONAL EXPERIENCE

AI Solutions Engineer — DXC Technology

Mar 2025 – Present

LangGraph, MCP, Python, PostgreSQL, REST APIs

- Building an agent-based patch remediation workflow in LangGraph — the agent checks patch compatibility, evaluates vulnerability risk, and applies updates automatically, with a mandatory human approval step before anything high-risk goes through.
- Designed the PostgreSQL schema that stores agent run history, node-by-node execution state, and checkpoints, so any run can be replayed or audited after the fact.
- Built custom MCP tools so the agent can query vulnerability databases and pull live system status without hardcoding a separate integration for every data source.
- Added retry and fallback logic for failed steps, and set up conditional routing so the agent escalates to a person instead of guessing when it hits an edge case.
- Use Claude Code day to day to prototype and test new agent modules faster before they go into the production pipeline.

Senior Analyst — BI & Enterprise Automation — DXC Technology

Jan 2021 – Mar 2025

Power BI, DAX, SQL, PowerShell, ServiceNow, Azure Data Lake

- Built and maintained Power BI dashboards (DORM platform) covering incidents, problems, changes, and service requests, rolled out to 100+ enterprise accounts.
- Wrote DAX measures for ticket aging, reassignment counts, and SLA compliance that cut recurring manual reporting work by about 40%.
- Set up automated ingestion pipelines from Azure Data Lake and Oracle for CMDB assets, job health, and CPU/memory telemetry, cutting manual reporting effort by roughly 35%.
- Wrote PowerShell scripts to detect and remove unauthorized software across 20,000+ endpoints, saving an estimated 135 FTE-hours of manual audit work.
- Applied row-level security in Power BI so each client account only sees its own data, across 100+ concurrent customer deployments.

EDUCATION

B.Tech, Computer Engineering — A.I.E.M, Hooghly

2016–2020 • DGPA 7.53

Higher Secondary (Science) — Burdwan C.M.S High School

2014–2016 • 85.0%

CERTIFICATIONS

- RHCSA — Red Hat Certified System Administrator
- Oracle Cloud Data Management (2022, 2023)

HONORS

- Champion Award FY26 H1 — Diamond Excellence Award
- Champ Award (FY24 Q4, FY23 Q1/Q4)
- Portfolio Star Runner-Up FY23
