

Professional Summary

Senior Data Analyst with 5+ years of experience designing scalable BI and automation solutions across banking and enterprise infrastructure domains. Led development of 100+ enterprise dashboards supporting 300+ stakeholders, reducing manual reporting effort by 40% and improving operational visibility across business units. Specialized in advanced data modelling, SQL performance optimization, ETL automation, and secure Power BI deployments (RLS, Apps, Incremental Refresh). Strong background in hybrid cloud data integration (AWS S3, Azure Blob, Oracle) and workflow automation using PowerShell and Power Automate.

Skills

- **Business Intelligence:** Power BI (DAX, Data Modelling, RLS, Incremental Refresh, Query Folding, Direct Query)
- **Data Engineering:** SQL Optimization, ETL Design, Star Schema, Data Transformation
- **Automation:** PowerShell, Power Automate, Python
- **Cloud & Storage:** AWS S3, Azure Blob, Oracle
- **Containerization & Orchestration:** Docker, Kubernetes
- **Leadership & Collaboration:** Stakeholder Management, Cross-functional Team Coordination, Deployment Ownership

Professional Experience

Senior Analyst | DXC Technology | January 2021 – Present

- Automation Engineering (PowerShell, Power Automate, Python)
- Multi-Source Data Integration & Hybrid Cloud Analytics (AWS, Azure, SQL, Oracle)
- Secure Analytics Deployment (RLS, Governance, Client Segregation)
- Monitoring, Alerting & Operational Health Intelligence Frameworks
- Stakeholder Management & Cross-Functional Collaboration

Projects

DORM – Centralized Operations Dashboard

Role: Senior Data Analyst

Tech Stack: Power BI, DAX, SQL, ServiceNow, SharePoint, Power Automate

- Built centralized Power BI dashboard consolidating Incidents, Problems, Service Requests, and Changes into a unified operational view.
- Visualized ticket priority, aging, reassignment count, and last update status to help teams prioritize critical work.
- Integrated infrastructure and application health checks with ticket data for proactive issue identification and SLA tracking.
- Replaced fragmented email-based reporting with a single operational intelligence platform used by cross-functional teams.
- It is adopted across 100+ customers and 200+ customer in pipeline.

Intelligent Operations Dashboard Suite

Role: Senior Data Analyst

Tech Stack: Power BI, DAX, SQL, ServiceNow, Azure Data Lake, SharePoint, Power Automate

- Designed and deployed enterprise-wide Intelligent Operations dashboard suite consolidating Incident, Service, Risk, Security, Application, and Infrastructure monitoring across multiple clients. (CMDB, Health Checks, historical analysis, Forecasting Reports)
- Built KPI-driven dashboards for SLA compliance, MTTR, transaction health, DB job failures, antivirus compliance, and CPU/Memory utilization across Wintel & Linux environments.
- Automated data refresh and backend workflows, reducing manual reporting effort by ~35% and improving proactive incident detection.
- Delivered centralized operational intelligence platform improving performance visibility and decision-making for cross-functional teams.

Automated Security Compliance Monitoring

Role: Automation Engineer / BI Developer

Tech Stack: PowerShell, Windows Server, Task Scheduler, Power BI, SharePoint, Power Automate

- Developed secure PowerShell framework to automate daily configuration and access-control validation across 2000+ enterprise systems.
- Implemented automated checks for folder restrictions, CMD blocking, enforced browser policies, and other security compliance rules.
- Generated structured log reports and integrated output into Power BI dashboard for centralized compliance monitoring and trend analysis.
- Reduced ~90 FTE manual audit effort and improved visibility into system-level security adherence.

Business Transactions and Refund Governance

Role: Automation Engineer / BI Developer

Tech Stack: Power BI, SQL

- Developed a Refund Dashboard that automatically identifies refund eligible cancelled transactions based on predefined business rules and criteria. The dashboard also highlights non-eligible transactions that were mistakenly refunded, enabling real-time exception tracking. Business teams can efficiently monitor refund statuses, investigate discrepancies, and take prompt corrective actions.
- Designed a centralized Power BI dashboard by integrating data from 80+ databases to provide real-time insights across 90+ global branches. The dashboard enabled tracking of workload, profitability, turnaround time, and refund trends—helping the client identify operational bottlenecks, detect anomalies, and improve overall branch performance.
- Designed Power BI solutions to maintain database hygiene by providing clear, auditable tracking of large-scale data purging, including detailed reports on purge volumes and data age, ensuring full compliance with audit requirements.

Unauthorized Software Remediation Automation

Role: Automation Engineer

Tech Stack: PowerShell, Microsoft Intune, Windows Endpoint Management

- Designed and implemented an automated software compliance framework to monitor and enforce authorized software policies across 20,000+ enterprise endpoints via a centralized jump host environment.
- Developed PowerShell scripts to remotely collect installed software inventory (including versions) from all endpoints and consolidate results for compliance validation.
- Compared collected inventory against an approved software baseline provided by security teams to identify unauthorized or non-compliant applications.
- Built automated remediation logic to remotely uninstall unauthorized software from affected endpoints, ensuring policy adherence without manual intervention.
- Enabled centralized compliance monitoring and reporting for security and IT governance teams.
- Reduced manual validation effort equivalent to ~45 FTEs and significantly improved software governance efficiency.

Education

B. Tech | A.I.E.M | Hooghly | July 2016 - July 2020 | DGPA-7.53

Higher Secondary | Burdwan C.M.S High School | Burdwan | July 2014 - May 2016 | Percentage-85%

Certifications

- Oracle Cloud Data Management 2022 Foundation
- Oracle Cloud Data Management 2023 Foundation
- Red Hat Certified System Administrator (RHCSA)

Achievements

- H1, H2 FY23 Collaborators Award.
- Runner Up Top Contributor for Portfolio Star – CNEE FY23.
- Champ Award FY24 Q4, FY23 Q1, Q4.
- Diamond Excellence Award for best contribution among the team.
- Champion Award FY26 H1
